

Neoturnupband

There are always turn-up band runs, however, which have extraordinary needs in terms of band dimension stability and non-fali. For these "outliers" or for customers looking to characters beyond the normal. Neotechnology has developed a product to cover that need as well.

Neoturnupband product is a 100% virgin bleached and unbleached Kraft papers by several time folding. Neoturnupband guarantee the safest and most economical sheet transfer for a wide range of paper widths, basis weights and machine speeds.

Patented(in korea) folded band technology paves the way for using the thinnest possible tapes, reducing sheet marking and increasing output as a result.

The process of the paper sheet transfer is critical moment in paper manufacturing. Uncontrolled sheet transfer onto a new reel can cause unnecessary waste of high quality paper. Besides the turn-up system used for this sheet transfer the proper tape plays another important role. The quality of these tapes is a critical factor for paper makings.

Technical parameters

length(m)	600~620
thickness(mm)	0.9~1.0
total width(mm)	150
construction	Folded paper band
stabilisation	Dimension-stabilisation
rolls per palette	maximum 54
colours	standard colours - brown
